

Global Warming And Energy Policy

Chart 1

Historical emissions and future damages

The poor will suffer most from, but contributed far less to, climate change.

(percent)

Source: World Bank (2010).

Note: Hope (2009, with additional data provided to us) shows that under business as usual (3.9°C warming above pre-industrial levels by 2100) or optimal climate policy (2.6°C warming), the share of developing countries in global climate damages varies from 84 percent to 86 percent. This is a consistent result across a range of integrated assessment models, as reported in World Bank (2010).
